

WP3 - Framework for forest SES and vulnerability assessment

Emanuele Lingua, Luca Marchi, Maximiliano Costa

2019 schedule.....

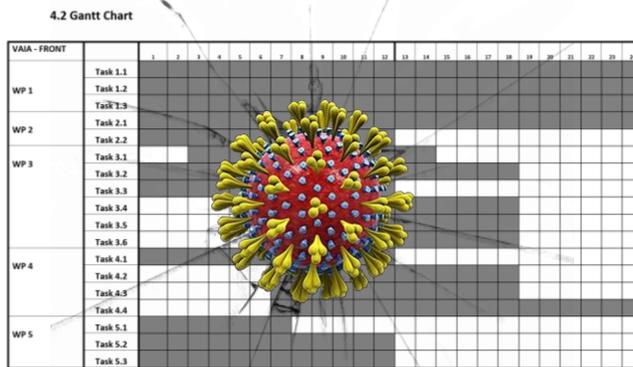

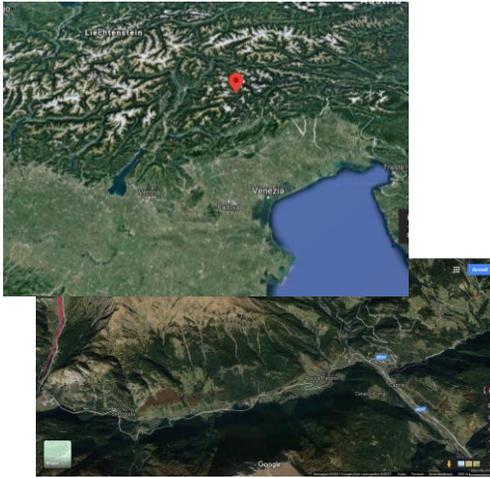

Fig. 2. Timing of the VAIA - FRONT Work Packages and Tasks

Main study site

Rocca Pietore (BL)

Elevation 1,143 m a.s.l.
Municipality area 73.29 km²
Inhabitants 1,190 (2020)

Advisory Board mid-term evaluation

Task 3.1 Assessment of the vulnerability of trees and forest stands to wind forcing

Task 3.2 Assessment of the vulnerability of forest Ecosystem Services (ESS) to wind disturbance

Task 3.3 Assessment of the vulnerability of linear infrastructures to wind disturbances

Task 3.4 Assessment of the human vulnerability during storm events

Task 3.5 New susceptibility to snow avalanches after storm events

Task 3.6 Vulnerability of the wood market to storm events

Advisory Board mid-term evaluation

Task 3.1 Assessment of the vulnerability of trees and forest stands to wind forcing

Field tests

ForestGALES (fgr)

Advisory Board mid-term evaluation

TESAF Dipartimento Territorio
e Sistemi Agro-Forestali
Università di Padova

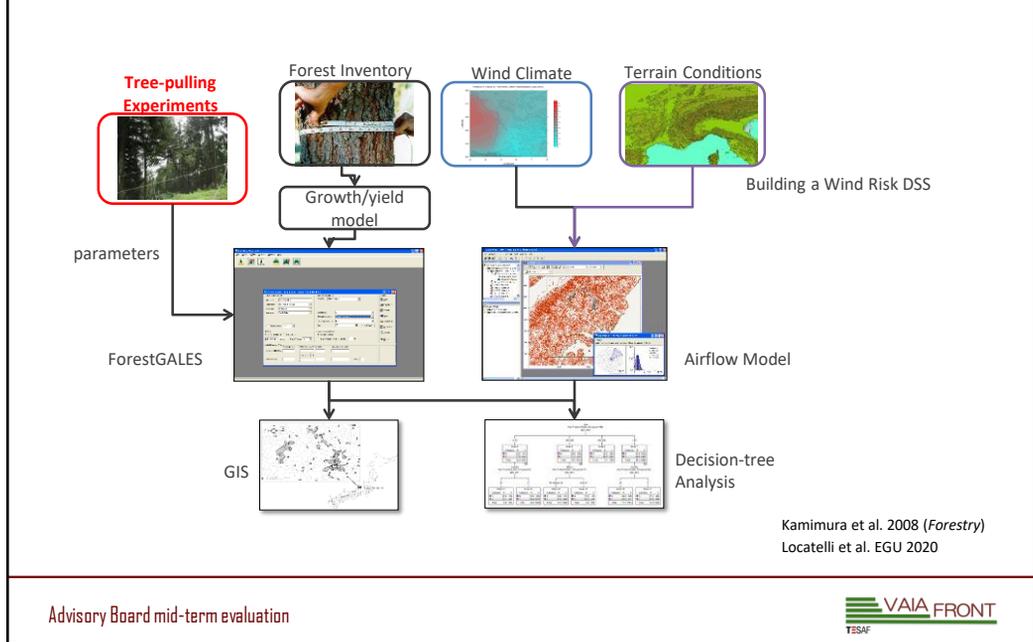

Webinar, 2021.2.19

Uprooting Resistance of large DBH Norway spruce in Eastern Prealps

Ph.D. Eng. Luca Marchi

The ForestGALES approach

Need to feed it with new pulling test data

ForestGales' trees mechanical parameters are based on an impressive dataset of 2000 pulling tests

Such models includes tree species of the Italian Alps

- Resistance to overturning of the root-plate system → pulling tests → Root-plant Bending Moment

$$M_{crit_over} = C_{reg} \times Stem\ Weight$$

Limited to **DBH < 35cm**
for Freely-draining mineral soils

Need to feed it with new pulling test data

October 2018

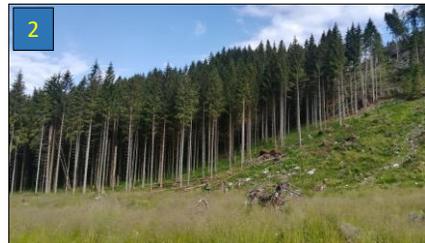

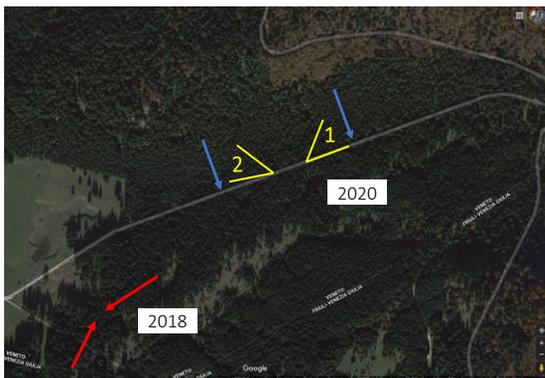

The week after

Advisory Board mid-term evaluation

Test site: Cansiglio forest (Veneto Prealps, NE Italy)

Advisory Board mid-term evaluation

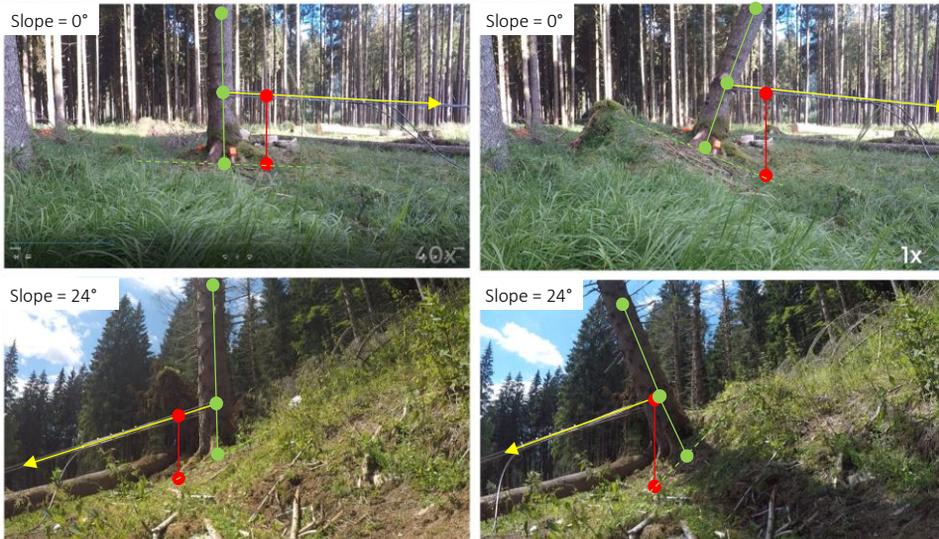

Pulling test

Advisory Board mid-term evaluation

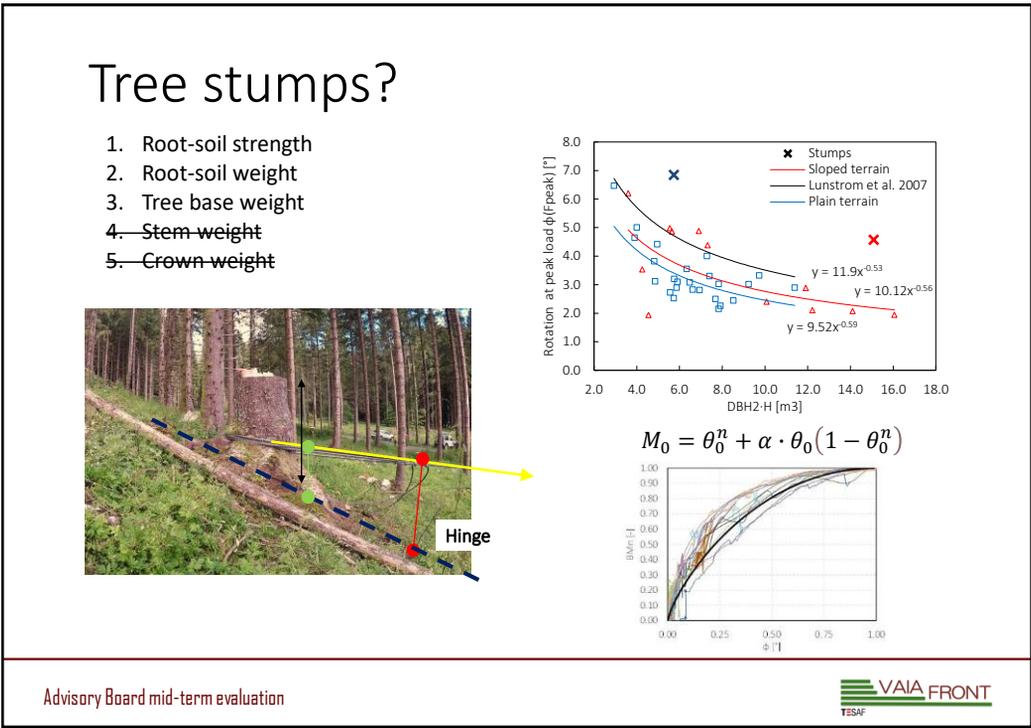

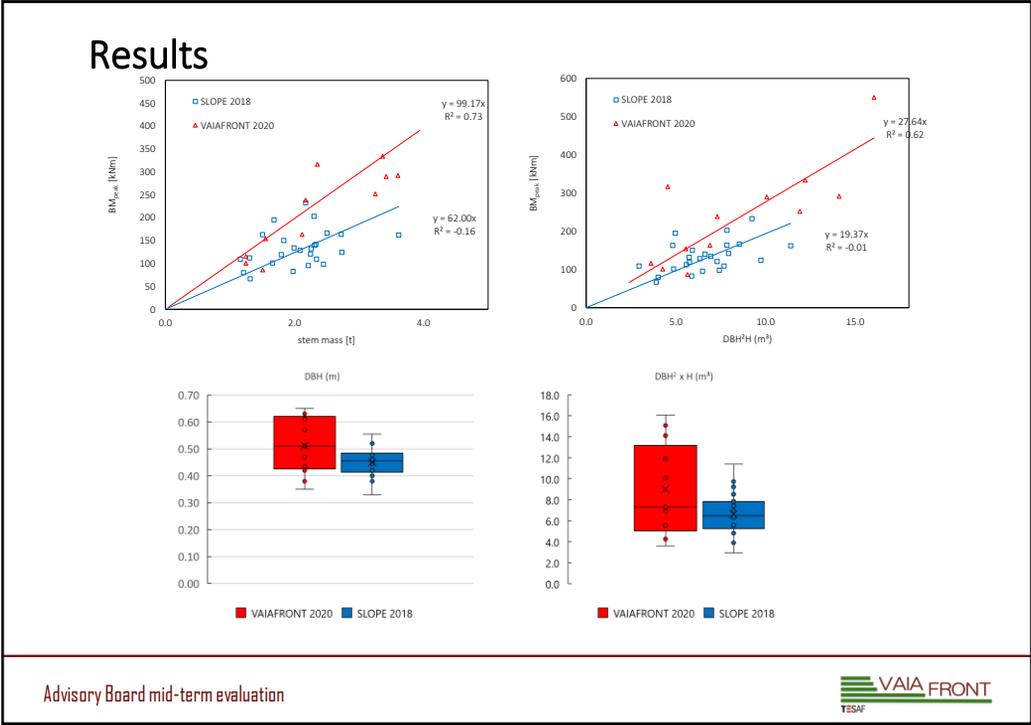

Sloped vs. plain terrain

Advisory Board mid-term evaluation

Pulling test

Advisory Board mid-term evaluation

Task 3.2 Assessment of the vulnerability of forest Ecosystem Services (ESS) to wind disturbance

Protection function

WP4

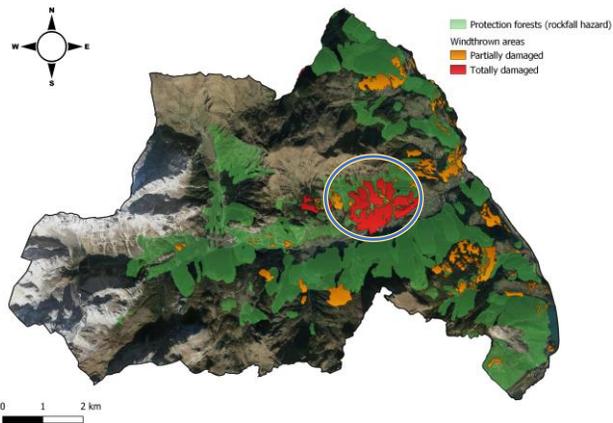

Advisory Board mid-term evaluation

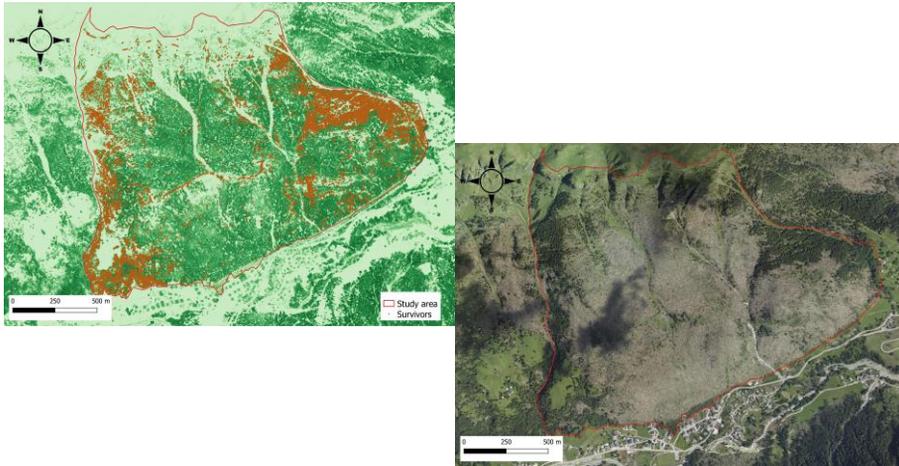

Vaia and protection forests

Ph.D. candidate Maximiliano Costa

Rocca Pietore municipality and rockfall hazard

Study site - 1

Advisory Board mid-term evaluation

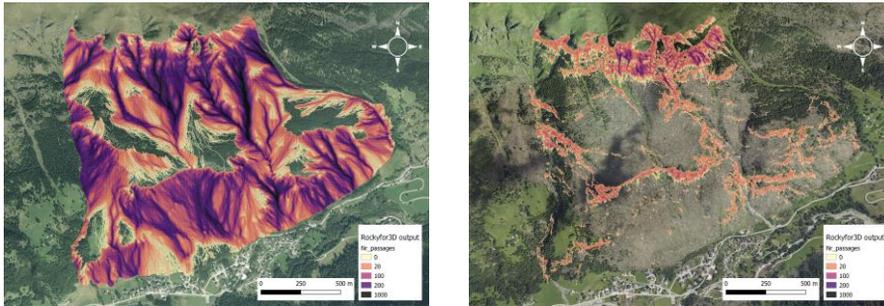

Study site - 2

Advisory Board mid-term evaluation

Before and after Vaia scenario

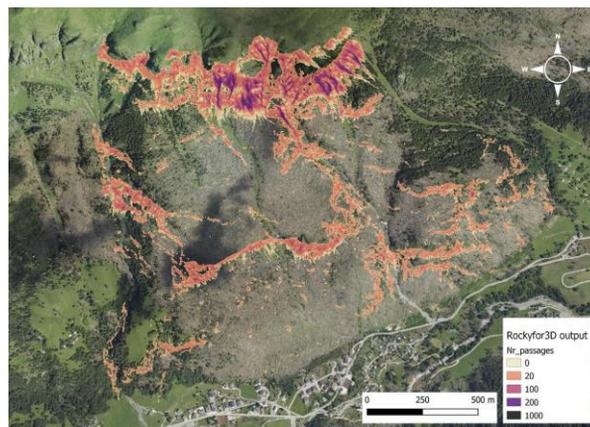

Simulations run with a 1x1x1 m spheric block

Advisory Board mid-term evaluation

Next years scenario

Simulations run with a 1x1x1 m spheric block

Advisory Board mid-term evaluation

Lingua et al. 2021 – Book chapter

Costa et al., to be submitted next week-early March

Marchi et al. 2021 – in prep.

Journal: International Journal of Forest Engineering

Title: Overturning resistance of large diameter Norway spruce (*Picea abies* (L.) Karst) in sloped terrain

Task 3.3 Assessment of the vulnerability of linear infrastructures to wind disturbances

Waiting results from 3.1

Database implementation

Task 3.4 Assessment of the human vulnerability during storm events

Started, main activities
postponed to the second year

Advisory Board mid-term evaluation

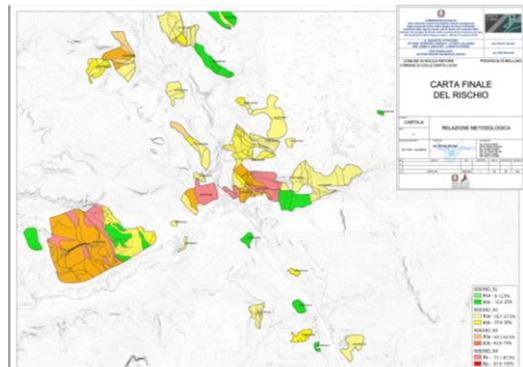

Task 3.5 New susceptibility to snow avalanches after storm events

The analysis has been carried
out by ARPAV

14 sites
301.57 ha

The output will be used in Task
3.2 and WP4

Advisory Board mid-term evaluation

Task 3.6 Vulnerability of the wood market to storm events

Data collection ongoing

Main output in the second year

Advisory Board mid-term evaluation

VAIA FRONT
TESAF

Thanks for your attention!
